Speaker: Dr. Earle Luck

Warner Professor of Astronomy, CWRU

Professor of Physics, CWRU

Archaeoastronomy and Ohio

The peoples of pre-historic Ohio left a number of sites in southern Ohio that have been claimed to hold astronomical sightlines. The most famous of these sites are the Newark Mounds and the Serpent Mound. We shall start with a brief primer on basic astronomy including the Saros cycle and proceed to discuss the found evidence for astronomical alignments in ancient Ohio.

High School Teachers interested in bringing two students, as our guests, please contact Bob Sledz, President, at 440-333-7827 or sledzbob@yahoo.com, if possible two weeks or more prior to scheduled meeting date.
