**Thursday, January 6, 2011 Meeting Announcement**

**Leonard Krieger CanalWay Center**

4524 East 49<sup>th</sup> Street (turn onto Whittlesey Way to reach Center),  
Cuyahoga Heights (216-206-1000)

**Speaker: Kelly Jons**

Library Media Specialist

Shaker Heights High School

**Questar: The Timeless Telescope**

In this modern age of giant backyard Dobsonian telescopes, one might wonder why anyone would spend thousands of dollars for a 90 mm telescope designed in the 1950's. But for some types of astronomy (and certain astronomers), a small high-quality telescope is the first choice. Kelly Jons' talk will highlight many of the features that make a Questar telescope unique and reveal the diverse types of real astronomy that can be done with this telescope and others of this size. Here is your opportunity closely to examine a Questar and take home a wealth of handouts related to the effective use of small telescopes. This multimedia presentation will have you wondering if your next telescope should be a Questar.

High School Teachers interested in bringing two students, as our guests, please contact Bob Sledz, President, at 440-333-7827 or [isledz@yahoo.com](mailto:isledz@yahoo.com) by the Friday prior to the scheduled meeting date.
