

Cleveland Astronomical Society Thursday, October 2, 2003 Meeting Announcement

CanalWay Center, Cleveland Metroparks, Whittlesey Way off E. 49th Street, Cuyahoga Heights

Speaker: Dr. George W. Collins II
Case-Western Reserve University

"Multiple Universes: Science, Sophistry, or Theology?"

In this talk, brief for such a big topic, Dr. Collins will investigate some of the properties of the multiple universes. These include multiple universes of quantum mechanics and parallel universes of physical theories dealing with the unification of quantum mechanics and general relativity. They also include the possibility of an infinitely large physical universe. Dr. Collins says that he will focus on "whether or not these representations of the real world have any scientific content and judge the extent to which they have testable properties in our universe." Dr. Collins always presents an excellent, thought-provoking talk. Come hear this one and ask your questions.
